SUMMARY

Game Developer with a strong engineering background in real-time systems, simulation, robotics, and control engineering. Experienced in Unity, C#, gameplay systems, multiplayer implementation, state-driven logic, and event-based architectures through multiple completed game projects. Former Control Systems Engineer at ASELSAN with 5+ years of experience building and testing complex real-time systems, simulations, and motion-planning workflows.

EXPERIENCE

Control Systems Engineer

Jan 2019 – Feb 2024

ASELSAN A.Ş.

Ankara, Turkey

- Developed real-time drive and control systems for robotic weapon platforms, focusing on stability, feedback loops, precision, and system reliability.
- Designed, modeled, and tuned control systems using MATLAB and Simulink.
- Created and simulated motion-planning algorithms using Python, ROS 2, and Gazebo.
- Worked with physics-based simulations, time-step loops, state-based logic, debugging workflows, and performance-sensitive systems.
- Collaborated across engineering disciplines including software, electronics, mechanics, and system design.

Electrical and Electronics Engineer

Jul 2018 – Jan 2019

Otonom Teknoloji Robotics, Electronics & Software

Ankara, Turkey

- Participated in the design and analysis of embedded systems and PCB layouts for robotic systems.
- Worked on hardware-software integration tasks involving real-time signals, low-level logic, and electronic system design.

PROJECTS

Turn-Based Stock Market Board Game | Unity, C#, Mirror

2024 – Present

- Designed and implemented a 2.5D turn-based strategy board game with stock-market simulation mechanics.
- Implemented multiplayer features using Mirror, including turn flow, player interactions, and networked game state handling.
- Built core gameplay systems including stock price simulation, drafting logic, turn management, and player decision flow.
- Used ScriptableObjects and event-based patterns to structure gameplay data, UI updates, and system communication.

Action RPG Prototype | Unity, C#

2024

- Designed and implemented a 2.5D action RPG prototype with character skills, enemy behavior, and quest tracking.
- Built orb-based skill crafting logic using ScriptableObjects.
- Implemented enemy tracking, combat interactions, animation triggers, and gameplay UI elements.

Zombie Survival Game | Unity, C#

2024

- Designed and implemented a 3D post-apocalyptic zombie survival prototype.
- Implemented gun mechanics, firing logic, zombie tracking behavior, and related gameplay animations.
- Built core player interaction systems and survival gameplay loop elements.

EDUCATION

Barcelona Code School

Jan 2025 – Mar 2025

Bootcamp: Game Development with Unity and C#

Barcelona, Spain

Istanbul Technical University

Sep 2020 – Jun 2023

M.Sc. in Mechanical Engineering, System Dynamics and Control

Istanbul, Turkey

- Thesis: “Optimizing Dynamic Window Approach for Autonomous Robots Using Deep Neural Networks.”

Middle East Technical University

Sep 2013 – Jun 2017

B.Sc. in Electrical and Electronics Engineering

Ankara, Turkey

SKILLS

Game Development: Unity, C#, Gameplay Systems, Multiplayer, Mirror, ScriptableObjects, UI Systems

Programming & Tools: Python, Git, Jira, Docker

Simulation & Engineering: MATLAB, Simulink, ROS 2, Gazebo, Motion Planning, Control Systems, Real-Time Systems

Languages: Turkish (Native), English (Professional), German (Limited Working), Spanish (Limited Working)

INTERESTS

Board Game Design, Strategy Games, Chess, Bridge, Fitness & Calisthenics, Dart
